AutoCAD is designed to be used by both professional and novice users, making it a popular choice among students and home users. AutoCAD comes in two versions, the desktop and mobile, with the latter also offered in a Web-based version. AutoCAD has received critical acclaim throughout its history. In 2009, USA Today praised AutoCAD for being a "powerful, easy-to-use" program and praised users for "finding ways to exploit the program's capabilities, even if they don't understand what they're doing." In 2012, Popular Science named

AutoCAD one of the top 10 CAD programs, calling it a "Gem" of a program and praising its "intuitive user interface". Later that year, the program won the "Best in Class" award from PC Magazine's "Top 10 Products" review. AutoCAD continues to win accolades, being named one of the five best CAD software programs of 2013 by PC Magazine in the April 2014 issue.

History 1980s to 1990s AutoCAD was originally developed by James Smith and his partner Larry McVoy to serve as a front-end for the DEC VAX graphics terminal in Smith's home. After a contract dispute, Smith and McVoy were later acquired by 3Dfx.

The acquisition also resulted in a number of changes in the company's business strategy, which included moving the headquarters to San Rafael, California, from Stockholm, Sweden, and down-sizing the DEC VAX development effort. In March 1982, 3Dfx was acquired by Silicon Graphics (SGI), and in 1984 the three founders of 3Dfx -- Smith, McVoy and Ken Lunde -- started a new company called Autodesk. Smith also became the company's CEO. Autodesk was very successful, and was eventually acquired by Avanquest in 1999. It later went public in 2001. In November 1984, the first commercial release of AutoCAD

was released by Autodesk. It was originally targeted for systems running on a DEC VAX 11/780 or an equivalent system. In 1988, the Autodesk Graphics Interchange Format (AGIF) was created to provide a standard for exchanging graphics between various programs, including AutoCAD and other programs. 1990s to 2000s In 1994, version 2.1 of AutoCAD was released. The same year, the program was ported to Microsoft Windows. In

Overriding multiple controls with the same id I have a modal popup where I want to open two links in a table (not the same table obviously). This is the html I am using: The problem is when I click on the first link, the second is also opened. How can I make it open the links separately? A: That's because all elements with the same id are considered the same element. id

Identify one element on a page. The id

must be unique in a document. From HTML5.1 Definition of the id Attribute
What you could do is change the id and use a class instead:

What's New In AutoCAD?

Add and update markup-driven documentation in your CAD models. You can update any type of markup in your drawing, and the changes will be reflected in the design without having to redraw.
