The first (and for many still the most important) functional difference between CAD and drafting software applications is that drafting applications were used to produce technical drawings, while CAD applications were intended for the design and planning of actual physical things, like the design of an architectural plan or a plumbing system. Therefore, a CAD operator's role is to create a drawing that shows the end product: either a technical drawing that is suitable for printing, or a construction drawing of a concrete beam or other physical object. Since the 1970s, AutoCAD has become the industry standard for technical drawing creation. Another characteristic of the drafting application is that the information displayed is often only a temporary snapshot. This allows for reviewing a drawing before finalizing it, as well as for adjustments or changes. A drafting application will typically ask for specific information, such as scale, dimensions, depth, and other dimensions, and then display that information in the drawing. The focus of a drafting application is very much on the process of creating a drawing by using the layers, linetypes and attributes of objects. Like a blueprint or a 2D vector drawing, the design of a technical drawing is its own process, where an operator selects and arranges items on a canvas using a variety of tools, such as lines, arcs, circles, rectangles, text, dimensions, text styles, and so on. The selection is often based on a previously saved template or an initial "scratch" drawing. Objects, such as lines and text, are created or modified using the AutoLISP or AutoCAD commands. After creating a drawing, any changes are made using the Append command, and are typically saved. AutoCAD has been designed with the user in mind. Since many users find traditional 2D drafting to be too restrictive, AutoCAD is designed to be as flexible as possible. Most of its functions are accessible by a mouse or a keyboard, with no need for a graphics tablet. The interface is such that the CAD operator can see the drawing being worked on at any time, as he or she is designing the object. This is quite different from most other CAD software, which is typically very simple and is mostly concerned with creating drawings quickly and efficiently. AutoCAD was designed to be very easy to learn. The software was originally developed to be used by engineers who had little to no computer experience, and AutoCAD was designed to be intuitive. SCAD for AutoCAD is a plug-in for AutoCAD that allows users to draw in a fashion similar to SolidWorks and Inventor. It includes the following features: automatic fitting, automatic perimeter offset, drawing of 3D solids, element snapping, comprehensive information from SCAD, live 3D viewing in a 3D coordinate system, and a 3D viewport that can be used to control any object from the 2D drawing area. It also supports AutoCAD drawing order editing to support parallel engineering. AutoCAD LT was a predecessor to AutoCAD. The "LT" stands for "Light," and is distinguished from "AutoCAD" by the fact that it only supports 2D work, is designed to run on a light-weight operating system and its native file format is different, which makes them incompatible. AutoCAD LT can be used to produce light 2D drawings. AutoCAD 2010 was a major redesign of AutoCAD by Autodesk, with the intent of making it the "all-in-one" solution in CAD. AutoCAD 2010 is the first CAD program to support all of the Autodesk software applications such as Inventor, Navisworks, and Project Management software. It was released in February 2010. A sudden total loss of vision was produced by aspiration of the vitreous humour of one eye of rabbits. There was no change in the degree of central inhibition of aqueous and vitreal flow by pressure in the other eye. The local kinin content of the aqueous humour was increased in the eye which was deprived of vision and this was paralleled by a rise in the concentration of bradykinin in the choroidal vessels of that eye, but no change in the concentration of substance P, was found in either the aqueous or vitreous humour of either eye. This study shows that a sudden loss of vision in the rabbit eye is due to an increase in the content of bradykinin in the aqueous humour, a phenomenon not previously demonstrated in mammals.Q: For $k\in\mathbb N$ a prime, prove that $\frac{p_{k}^{2}}{p_{k-1}^{2}}$ is a square modulo p_{k} For $k\in\mathbb N$ a prime, prove that $\frac{p_{k}^{2}}{p_{k-1}^{2}}$ is a
