### MultiRun For Windows

MultiRun is a lightweight Windows application whose purpose is to help you run multiple software programs in a sequence. The advantages of being portable The portable running mode ensures no entries are written in your Windows registry and configuration data in your computer. You can open the program by simply running the EXE file and bypassing the installation process. What's more, you may copy the utility on a USB flash drive or other devices and run it on the target computer without administrative privileges. Clean layout MultiRun adopts a straightforward interface that gives you the possibility to keep track of multiple profiles. You may edit or delete the selected profile, activate warnings upon profile and program deletion, as well as automatically run a profile when you plug in your flash drive into the computer. Creating a profile The application allows you to customize a profile by adding multiple user-defined programs. In addition, you may edit or delete the selected profile. A new tool can be added to the list by specifying the program's executable file, starting directory and custom parameters. Furthermore, you may pick the running mode (normal or hidden window, minimized or maximized panel), enable a single instance, and carry out a test in order to check out how it works. MultiRun offers you the freedom to send user-defined keystrokes to the application after it is opened, and wait for the utility to close after a custom number of seconds. Last but not least, you are allowed to resize the main window of the app and alter its position after the tool is launched, as well as set up title match parameters by entering two custom text messages and picking the match mode (e.g. 'exact match,' 'starts with,' 'contains'). Bottom line All in all, MultiRun delivers a straightforward way for helping you run programs in a sequence and customize the running mode of each executable file. The intuitive feature pack makes it suitable for rookies and professionals alike. MultiRun Description: MultiRun is a lightweight Windows application whose purpose is to help you run multiple software programs in a sequence.
