What Is AutoCAD? AutoCAD is used to create, edit, modify and analyze 2D and 3D drawings. AutoCAD is primarily used for designing and engineering purposes, but it has also been used by architects, interior designers, landscape architects, medical professionals, and even artists, graphic designers, architects, engineers, and other professional designers. It can be used to create electrical diagrams, electrical schematics, hydraulic schematics, mechanical diagrams, architectural diagrams, drafting applications, and so on. How Does It Work? AutoCAD works on the principle that the computer can display the design drawings to the user without being dependent on the graphic modes that the user may have installed in the computer. The computer can also analyze and edit these drawings in accordance with user defined parameters. It will plot and generate 2D or 3D diagrams and views as required by the user. Using AutoCAD, a user can create a drawing, add text, label or otherwise annotate the object in the drawing, save the drawing, modify it and change its orientation, change its scale, make any changes to the attributes and geometry of the object, save the changes, and print the drawing. The rocket attacks from Gaza have been causing casualties and causing damage to Israel which is a terrorist state. I wouldn't say it's terrorism, I would say it's a response to an occupation and… Do we need to actually rule over the Palestinians? Is that necessary? We're already in charge of every other country on earth. We're in charge of all the other people living in Israel and we're in charge of every other person in the world. We're the world police. Is there something we should rule over? I'm not clear about what you mean by ruling over Palestinians or Israel, but I suspect it means something like coercing them into being your subjects. I disagree with it, I think it's stupid. I think it's a waste of resources and, frankly, I think it's wrong.
