The Lands Between are widely known as a war-torn land full of various monsters and dangers, and the place where Sorcerous tools called "Elden Rings" exist. The legend says that the player must "Find an Elden Ring and rescue the Knight of Elden", and raise their strength. The player has three actions per turn. ► **MOVEMENT** Because the Lands Between is a dangerous area, the "Move" action is generally used to move or traverse through the open fields. When the "Move" action is used to move while in the open field, the character will have their maximum move speed increased. When the "Move" action is used to travel to a location, the character will automatically be on the designated location. When you use the "Dash" action, you will automatically move to the location you designate. When the "Stand" action is used, the character will automatically remain on the designated location without moving. When moving while under the effects of the "Sleep" action, the character will be automatically transported. When moving while under the effects of the "Flee" action, the character will be automatically transported after the duration of the "Flee" action is ended. ► **COMBAT** While in the open field, enemies cannot be attacked unless they are on the ground, and when an enemy appears from a location on the ground, you can move against the enemy. When you attack, you will have a fixed attack combo. When you use an action that consumes a combo, you will receive HP damage if you use the combo. When you use the "Block" action, you will block the enemy attack that is being used with the corresponding action. The "Block" action will consume 1 combo. When you use the "Parry" action, you will use your own movement to prevent an enemy attack that is being used with the corresponding action. The attack that is affected will be completely blocked and the attack will disappear. If you use a "block" action on an attack that is affected by "Parry", the attack will disappear. The "Parry" action will consume 1 combo. When you use the "Taunt" action, you will convert your attack combo

Fall from above, die from below: a novel molecular mechanism of blood brain barrier degeneration in sporadic amyotrophic lateral sclerosis. Amyotrophic lateral sclerosis (ALS) is a degenerative disease of motor neurons, which leads to progressive paralysis, bulbar palsy and respiratory insufficiency. Altered cerebrospinal fluid (CSF) composition is a characteristic event in ALS patients. CSF markers of axonal degeneration (TDP43 protein) have been shown to precede the onset of ALS symptoms and to dramatically decrease following treatment with riluzole. Due to the lack of therapeutic interventions at the clinical stage of ALS progression and to the presence of TDP43 in microglial and astrocytic blood vessels, the question of whether blood vessels are also involved in ALS pathogenesis has been raised. In this study, we have demonstrated, that astrocytes from the ALS postmortem tissue show increased growth arrest-specific gene 6 (Gas6) expression paralleling an increase in TDP43 quantity, a molecular marker of astrocyte degeneration. In the present study, in a few patients with sporadic ALS (sALS) we detected diffusely distributed activated microglial cells and the co-localization of activated microglia cells with dying astrocytes expressing both Gas6 and TDP43. Additionally, double immunofluorescent analysis on dissociated brain cells of ALS patients demonstrated tau-positive co-localization events with TDP43 in the nuclei of microglia, thereby suggesting a novel molecular mechanism implicating microglial activation and

TDP43 nuclear co-localization in the degeneration of microglial cells and astro
