In a mobile communication system as described above, a mobile station has been provided with various settings which can determine the location where the mobile station is to communicate. For example, when setting radio zones of a mobile station, a user uses a menu display or a slide remote controller, selects a radio zone and presses a location setting button to set a location of the radio zone. In recent years, it has become increasingly important to reduce the number of steps in setting a radio zone. In this regard, a technique is known which searches for the best radio zone based on the number of radio zones to be set by a user, the radio zone search conditions and the radio zone search starting point (see, for example, Patent Document 1). Patent Document 1: Japanese Patent Application Publication No. 2002-204494Q. What term best describes the "too many questions to answer all" phenomenon? It seems like there are many questions that are just too obscure, or niche to be answered definitively, but contain useful information nonetheless. What term best describes the "too many questions to answer all" phenomenon? Example: "How do we best use an "information radiator" designed for the general public to render information to a wider public?" Or: "Which programming language's syntax is most expressive/logical/optimized/...?" A: It is not a problem in itself, it is how you approach it. How do we best use an "information radiator" designed for the general public to render information to a wider public? Ideally, such questions should be avoided, because they tend to attract "look-up-this" answers and end up being unhelpful. Instead, you could say: This turns your question into a survey and really isn't an answerable question. The best course is not to ask about an idea when you can find the specific question on an SE site. And think hard before posting such questions on StackOverflow. Having said that, the company is also keen on pushing forward with a new version of the OS that has been called Android Ice Cream Sandwich. Crowdsourced device information has revealed

that the Galaxy S II is getting its update next month, though no specific date has yet been announced. Samsung has confirmed that the update will improve on the overall performance of the handset and also speed up certain functions. The Android 4.0 update should increase the performance of the phone when it comes to browsing through web pages, loading data and photos. It will also speed up other functions that require a bit of processing power like browsing through the dialer and the contacts. "Ice Cream Sandwich will be installed in all Galaxy S II and Galaxy S Advance models globally through a software upgrade by the end of the year." Samsung's Vice President of Mobile Product Planning, Jong-seok Park, said in a blog post. "We expect this to be a great addition to the Galaxy S II and Galaxy S Advance devices." The company isn't just looking at having a good day with regards to its sales as it is also looking into improving its overall customer satisfaction. Among other functions, Android 4.0 will include a variety of new features. These include a revamped

interface that should make the user-interface more seamless to the eye. The update will also allow for easier multitasking. Also included will be native support for tabs, multi-window support, better battery life, etc. Despite the fact that there are reports that the Android 4.0 update will only be available for the Samsung Galaxy S II, we can expect that the update will be out for all versions of the handset and not just the flagship. It's also possible that it will also be released for the Samsung Galaxy S Advance. Mounthawk Mounthawk was one of the species of animal that existed before the Big Bang. Is the efficiency difference (with the parameter as a reference or as an lvalue) significant? A: Efficiency difference between `&value` and `value` is very small. While the former should be preferred, the latter one
