You are the memory keeper of a secret society called the surviving souls. The society discovers and sends out a hero that is chosen by the foreboding crystal. Your job is to help the hero with whatever task they have when they come. However each hero has a completely different set of abilities that makes them unique. Most items in the world have some type of functionality to enhance the hero. Each hero has a special set of stats called stat runes. Stats determine how powerful the hero is and can grant bonuses to stats in certain areas. A: Bit Dungeon 3 is a PC game. To be specific, it's a Roguelike game, with permadeath and random dungeons. It's being developed by Humongous Entertainment, a Polish indie studio. General Abrasiveness Test, a novel test for general abrasiveness: its reproducibility and comparability to four other tests. To investigate reproducibility and comparability to other tests of materials. The materials were subjected to abrasiveness tests using a specially developed, validated, one-dimensional grinder (Micro-Grinder; Abrasiv, Bausch & Lomb, Inc., Rochester, NY). Five materials were repeatedly tested: a glass microball (0.6 mm), a small lap saw (1 mm), fumed silica, an artificial tooth, and toothbrushing. Sixteen people, including 10 dental students, were tested. The abrasiveness of each material was measured by percent of grit loss at 1 time point and by percent of grit loss after 1, 2, and 3 days. The reproducibility of the test was then determined by four observers (kappa statistic). Correlation coefficients were calculated for the agreement of grit loss from the three-day abrasiveness test among the observers and the four tests using Spearman's correlation coefficient (SSC). Correlation coefficients of grit loss between the Micro-Grinder and the four other tests were calculated, and the SSC was compared with the correlation coefficients (Student's t test). The reproducibility was high for all materials. The grit loss after 3 days correlated well with the grit loss after 1, 2, and 3 days. The SSC, however, was always significantly different from the correlation coefficients. The

smallest correlation coefficient was observed for the toothbrushing (0.32). The Micro-Grinder was shown to be a simple, valid, reproducible, and comparable test.This is a guest post by the author of The

"The chase begins, hey beatitas? All I want is a cold brew, you hear me?" Beatitas looks nothing like he sounds. He looks like an average tourist. He's not a fighter, not anymore at least. He was once, a long time ago, and so was his brother. That time is now long forgotten as the two continued to fight, creating a long history in the field of combat. Beatitas was taught by his older brother to fight, creating the type of war-like brothers the two share. As a teenager, Beatitas was taught the art of a bow and arrow, as well as how to craft his own. The Bow and Arrow certainly came in handy as a teen, and as an adult he's able to craft weapons for his fellow warriors. It's something he can do at the game's launch. Things like a sword, spear, or axe would be too heavy and might get stuck in the dirt. It would make him more an actual weapon for fighting rather than just a type of weapon. However, something new was invented in the 15th century,

something powerful enough to knock out even the most strong of warriors. The mace. For those of you who don't know, a mace is an open-ended weapon, which means it is usable in a variety of situations. This wasn't the only new invention that was brought, but it was the one that would blow up the weapon world. The iron mace could crush everything with a single swing, yet it was lightweight. Beatitas was amazed when he found out how powerful the weapon was, and how it could turn the tide in any battle. This was the start of his journey into the unknown. Beatitas first travelled around the world trying to get some sense of a new weapon called the Nailbat. It's a similar weapon to the mace. However, it can only be used by one person at a time, thus his brother had his own set. His brother passed on the same knowledge to him and this is how they get into their own journey. Beatitas is still a simple tourist looking to get some good meals, but along the way he must find new equipment and items to complete challenges as well as a way to find this Nailbat. Beatitas controls his movement, moves, and uses attacks in the normal way. Unlike the other characters he doesn't use any spells, as he doesn't have any way to cast any spells. He can use his long-ranged

ings The Origins of First-Person Limited-Run Games by Aaron Meyers Understanding the challenge gamers face in succeeding at this moment in gaming history is akin to playing Jeopardy. It's complicated. And hotly debated. Which is exactly how it's been for several decades. Some say that this was a difficult time in gaming for a variety of reasons. Others say that the idea of a less hands-on player did not exist until the advent of computer games. Still others argue that the first real effort at a first-person shooter that only lacked the first-person experience, Doom, came six years after Wolfenstein. Or they might say that Limited-Run Games (LDR) started with Wolfenstein in 1987 and that Doom put an end to the LDR phenomenon in 1993, through to the end of the first Full-Motion

Video (FMV) segment in Doom, when the Elite is defeated by a BFG gun, the ship exploded, and only one spaceship arm remained which is spinning slowly as all of the features of the camera from the Single-Player campaign were deactivated — the remainder of Doom was its writer Aaron Swartz commentating on the aftermath of the original doom. Some say that the pause in the audio volume of Doom II during that sequence also ends the LDR industry. Further, to mix the timeline a bit, LDR began with SimCity (Miyamoto, 1981), though not as a dedicated, first-person game, and peaked with the debut of Doom in 1993, though again, there is more to the LDR phenomenon and it began long before Doom. Piercing Dissections: Wolfenstein 3-D Developed by id Software, Wolfenstein 3-D represents the first effort at utilizing full-motion video (FMV) in creating a commercial product using the then newly released technology. Like many of its pioneering contemporaries, such as James 'Jim' Brough in 1982, id Software got the idea to create a three-dimensional (3D) version of the classic first-person shooter from looking at the classic strategy hit, 1975's Computer Space. As the director of product development at id Software, Jamie Sefton, said in an interview with the Bystander in 2002, "Looking at Computer Space, which was very high-tech at the time, it just seemed like there could be a place for that [3Dness] in games."
