What's New in the?

* Lightweight, fast, & modern browser * Organize downloads and updates with a download manager * Very fast search capabilities * Powerful filtering for customizable web pages * System Manager for Quick File Management * Word Processor to easily create text documents * Instant Messaging & IM Client * World Clock and Calculator * Many addons for your everyday use
Some more features: * Visits history * Time, Date & Current Location * Back/Forward button Version 7.2 Final +Downloads manager: Download multiple files at once! +Downloads manager: Download multiple files at once! 1. Removes each download manager's icons from the system tray after the download has completed. 2. Stores the downloaded files in the downloads directory. -Removes each download manager's download history from the system tray. -Maintains the saved Downloads Directory in the application's settings, if a user doesn't create a Downloads directory himself. -Minor UI/UX updates. Change "ScanProxy" to "ScanUpdates" in "Settings"-Part. ===== I agree that you may sometimes want your friends to access your computer with a different network than you do. If they want to, then they will probably use your computer to access their own internet, so that you can continue your internet at the same time. By setting the proxy option to "ScanUpdates", you make sure that your friends will connect to the internet with a LAN connection, and you will have your internet connection at the same time. This is helpful because your internet (especially mobile) connection can be slower and less stable when connected with a 3G or mobile connection in comparison to the internet at your own computer. I recommend you to always choose your own connection and switch it off to your friends when you no longer want them to connect to your computer. Change "Install" to "Install and Uninstall" in "Settings"-Part. ===== When installing or uninstalling the application, the changes made will be uninstalled automatically. If you select "Install" (instead of "Install and Uninstall"), your changes will be made automatically, but the changes you have made will not be removed when you uninstall the application. ===== I think the icon for the application is great, but you may make it smaller. 3. Smaller icons. ===== I am using Windows 7. and I also installed JamesZhu Internet Browser
