If you are an avid AutoCAD user, you will know that you can create and modify objects (objects like a car, window, door, wall, etc) in a 3D space and use the drawing tools to place the object in a certain location in the 2D drawing window, cut a hole in the object, or use the drawing tools to modify the object. Here's a video which explains the basic 3D/2D interface and tools in AutoCAD. New features Autodesk has released AutoCAD 2018. Here are the new features and features upgrades: Edge and plane. AutoCAD 2018 introduces edge and plane. An edge is a 1-dimensional line that visually defines the area on a 2D sheet of paper. A plane is a 2D surface. Therefore, the area on a 2D sheet of paper defined by a set of edges and planes is called the space. You can create an edge in 3D and place it in the space, cut or move an edge in the space, define a plane, and create a new plane in the space. An edge can also be assigned to be an in-place reference. If you create an edge that is assigned to be an in-place reference, the edge will be automatically updated every time you place the edge or move it in the space. User defined actions. AutoCAD 2018 introduces user defined actions (UDA). A UDA is a command that you can assign to be executed when the corresponding button on the screen is pressed. If a command is a function, it is executed on the selected objects. If a command is an operator, it will be executed on the selected objects. For example, if you are selecting 2D or 3D objects, pressing the draw button will cause the selected objects to be drawn. You can assign different actions to the draw, create, edit, save, and undo buttons. Shapes. You can create polylines, polycurves, closed shapes, arcs, spline shapes, and text boxes in 3D. Weighting. You can create a context in which you have weighting information that is applied to the geometry. For example, you can create weighting information for a path, and have it automatically updated for you based on the path's current shape. Waypoint. You can create a point in 3D. You can also create and place a waypoint and automatically move the waypoint

With this model, CAD users are charged on an ongoing basis for the use of a given program. AutoCAD is available as a fully functional freeware with no cost. AutoCAD LT is free for use by one person in a single location and includes all drawing, annotation, and other drawing features available in AutoCAD.

AutoCAD LT is available on the Web and in desktop software. This version includes several features not found in other versions. On August 8, 2008, a cloud version of AutoCAD LT was made available on the Microsoft Azure cloud platform. On August 6, 2010, Autodesk released the AutoCAD 2011 update (v11) that included several additional features. For an introduction to the use of this model see: Commercial CAD packages Commercial CAD packages offer many more features than Autodesk's non-commercial program. These packages are very expensive, and are often sold on a perpetual license rather than a license per installation. For a list of commercial CAD packages, see:

The 24-year-old victim, who has not been named, was taken to New West Hospital in the Gold Coast after his leg was crushed in the crash at St Marys on February 3. He was left lying on his back as his leg was wrapped in bandages. The Goondarra man was a passenger on a two-wheeled vehicle which crashed near the corner of St Marys and Trunk roads about 11am. He managed to crawl to the side of the drain pipe where he could walk. But the leg eventually became trapped and it took rescuers three hours to winch him free.
