technique"]. Our aim was to improve the dose-volume-histogram (DVH) results of rectal dose escalation in abdominal radiotherapy by developing a technique to achieve a very homogeneous dose to the surface of the rectum by superimposing a 3-dimensional surface dose on the target volume. The dose delivered to the target volume and to normal structures was analysed using dose-volume histograms. A three-dimensional treatment planning system (TPS) was used to evaluate the techniques. A dose escalation protocol was designed,

testing the direct addition of a 3-dimensional surface dose (8 Gy in 2 Gy fractions) to the dose delivered to the target volume (16 Gy in 8 Gy fractions) as well as the addition of a 3-dimensional surface dose to the isodose (24 Gy in 12 Gy fractions). Differences in doses were analysed using DVH ca3bfb1094

Rasterize to BMP: There is now a simpler way to rasterize blocks, line style, text styles, and other resources without the need for rasterizing bitmap images. Dynamic layer binding: New features in Dynamic Layer Binding make it easier to quickly create multiple views in the same drawing. You can quickly create views, change the

visibility of layers, and show/hide layers with a single click. New Icons: AutoCAD has new icons. New icons with descriptive names are used to simplify many commands. If the dimensioning tools are active when you close the command line, they remain active until the drawing is closed. You can now choose the coordinate system to be used when you plot a coordinate. In legacy drawings, the default coordinate system was current UCS, but in AutoCAD, it's now current layout. If you select a rectangle or an ellipse, you can now choose the corner or the center of
