Q: How to retrieve the location of a button click event handler The only way I've been able to get it to work is by saving the name of the button's onclick event handler in a variable when the button is created. But is there an automatic way to get the location of the button's click handler after it's been clicked? Or a way that would be compatible with any asp.net button control? A: If I understand you correctly, you need to get the reference of that button and then handle the click event using the following code: `object btn = btnName.NamingContainer as Control; if (btn!= null) btn.Click += new EventHandler(btn_Click);` At the beginning of August we had the opportunity to travel to Osaka in Japan. In October of 2011, we started out on a 3 day visit to "The Land of The Rising Sun". The plan was simple. Our group met at the Embassy of Japan on 8th Ave in New York City. From there, we took a bus to LaGuardia airport and hopped on an Aeromexico flight out to Mexico City. We then boarded a G Adventures (GO) flight to Guadalajara. After a few days of relaxation, we arrived on August 6th in Osaka. We caught the Bullet Train up to Nagoya and from there we took a local bus to the hot springs town of Hakone. In total, we spent 3 days exploring this beautiful country. After a few days of hiking and a lot of shopping, it was time to head back to the main land. If you want to visit Japan with G Adventures, check out the tour packages on our website.

Using the Photoshop Brushes Bundle The following are the steps to create and use the Photoshop brushes in this bundle: Step 1 Use the Free Transform Tool to resize the photograph. This tool lets you move, rotate, and zoom an object. The Free Transform Tool lets you transform the position of the object. Resize the image by using the smaller of the two handles. Then move the objects as needed to fit the new dimensions of the image. Step 2 Locate the Brush Selection option in the Toolbox. Step 3 Select the first image in the Photographs project. Open the Brush List by pressing the T key and select a brush from the list. Choose a brush that best suits the effect you want to create. The size of the brush determines the size of the lines that you create. For example, if you want to create small, subtle lines, use a small brush. If you want to create large, bold lines, choose a larger brush. Creating Simple Line Drawings To create a line drawing, use a brush with a small, non-rounded tip and apply a cross-hatch texture. Your brush settings will determine the color, texture, and blending method for the hatch. The cross-hatch pattern creates sharp edges and is similar to the texture that you may see in a stained-glass window. You can use just one or two colors in the hatch (as shown in the image). Step 4 Select the Gradient tool. Then click and drag across the image to draw the gradients. The Gradient Tool lets you control the direction, thickness, and color of the gradients as you paint. To add variation to your gradients, you can click and hold the Shift key while you
