A figure-8 coil operates at high frequencies in the range of 100 kHz to 1,000,000 kHz and forms a homogeneous magnetic field. To prevent demagnetization, a compensating current is used to surround the figure-8 coil with a source of alternating current. The figure-8 coil also has the ability to produce a strong electric field. A resulting change in the electric field can be monitored and recorded as a function of position. A small diameter figure-8 coil may be used to inspect ferromagnetic or non-ferromagnetic materials having a specified eddy current coupling coefficient k. The figure-8 coil produces a pulsed magnetic field with an eddy current being induced in the object under investigation. The induced eddy current is given by the formula: $I=k \cdot B/d$, where B is the magnetic field strength produced by the coil, d is the distance between the coil and the object and k is the eddy current coupling coefficient. When a semiconductor device, such as a transistor, is placed near the coil and the transistor is conducting, the change in the magnetic field due to the eddy currents created by the coil will induce a voltage on the transistor. The voltage is a function of the distance between the coil and the transistor, the conduction angle of the transistor, the magnetic permeability of the material and the size and shape of the coil. The pulse width of the voltage is a function of the physical parameters of the coil. The figure-8 coil may be used to measure distance to a conductive object that is either ferromagnetic or non-ferromagnetic, such as a semiconductor device. During an eddy current test, the magnetic field produced by the coil is such that a small current flows in the object under investigation. Such a current is produced by pulsing the coil current at a desired frequency that, 50b96ab0b6

Bicycle Weddings is just one of these brides. Elle Kuss welcomed me in to her backyard for some delicious drinks and conversation. Elle and her husband are avid cyclists. Every year they ride 2000-plus miles in the Peloton Bicycle Tour. A Love Of Cyclist "I wanted to give myself a chance," said Elle. "That was my main focus - to ride my bike and not have an age problem. I was doing it for myself first and foremost, but to give myself a chance to gain something I wanted that I couldn't have in my life." She was just getting into biking in 2005. "I had pretty much learned to ride a bike, but I was still afraid of dirt. I bought the Soma Cycles mountain bike, and I had a lot of people around me - people I met from riding bikes." Her face lights up as she remembers. "It was a fun and diverse group that kept me from falling off my bike." The Bicycle Tour is a group ride, where participants join a group of other cyclists and the goal is to finish together. "We'd set out on our own or with our own cycling group or in a cycling relay group." Midway through the tour, the group would form into squads and ride until a certain time, say 2 p.m. in Elle's case, or 5 p.m. Some cyclists would make stops along the route to get food and to buy goodies for their teammates. Whether it was sheer stubbornness and refusing to quit or the love
