A: Install flashrom-0.9.0. And you can install with this command sudo apt-get install flashrom-0.9.0 After installing flashrom run it sudo flashrom -y Source: At least 30 people were killed and about 400 injured, in violent clashes between angry citizens and government forces in the Indian city of Kannur in Kerala. A large mob attacked a paramilitary camp in the northern Indian city of Kannur, injuring dozens of security personnel and killing 30 civilians, Indian media reported. Indian television footage showed throngs of people attacking police officers and soldiers from behind barricades with sticks and shovels. Kannur, a major trade hub in Kerala, has been the site of bloody clashes between local residents and security forces since December 15, when activists of the RSS-affiliated Niyoy Movement broke up a local public meeting organized by the ruling CPI(M) party. Organizers of the meeting had threatened to blockade the town if the government failed to impose a curfew in the area. On December 15, angry residents from the Malabar region of Kerala, home to the Hindu majority, attacked a police station, cutting power supplies, vandalizing vehicles and even setting fire to a bus. Police officials confirmed that at least 30 people died in violence in the town after security forces fired several rounds of tear gas to break up a protest and protect the life of a student, who was run over by a bulldozer. All stores, local markets and other business establishments were closed in Kerala, and in many other Indian states, on Sunday in a show of support to the protestors. While a curfew is in force in Kannur, many areas of the city are cordoned off by the police.Q: Least squares fitting polynomial for an experimental function I've a very simple question about fitting functions. I have a function $f(x)$ (that depends on one parameter p) and I want to fit this function to my experimental function $h(x)$. My question is: is the least squares $f(x) = (1-p)^n + p^n$ the function that I should use to fit for example experimental data like the one in the plot below? I can't see the arguments for using
